THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

Primary Examiner, Art Unit 1783

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

A review of Applicant's arguments in the Papers filed 6/3/2011 and 4/22/2011 and a review of the instant claims has convinced the examiner that the claims are allowable over the applied prior art of record.

2. Regarding independent claim 1 and the dependent claims, the prior art fails to teach or suggest a rubber access mat for forming a roadway or pathway for vehicles and people, comprising: a flexible rubber slab made from recycled vehicular tires, the slab having a top face and a bottom face defining a thickness of 3 inches, opposed side edges defining a width and opposed end edges defining a length; a first rigidifying grid of reinforcing steel wire embedded within the rubber slab spaced between the top face and the bottom face and consisting of a plurality of parallel spaced steel wires embedded within the rubber slab along a first plane and extending continuously between the opposed side edges for most of the width of the rubber slab and a plurality of parallel spaced steel wires embedded within the rubber slab and extending continuously between the opposed end edges for most of the length of the rubber slab; and a second rigidifying grid of reinforcing steel wire embedded within the rubber slab between the top face and the first rigidifying grid and consisting of a plurality of parallel spaced steel wires embedded within the rubber slab along a second plane that is different from the first plane and extending continuously between the opposed side edges for most of the width of the rubber slab and a plurality of parallel spaced steel wires embedded within the rubber slab and extending continuously between the

Art Unit: 1783

opposed end edges for most of the length of the rubber slab; wherein the diameter of the reinforcing steel wire of the first and second rigidifying grid is not smaller than number ten gauge wire in order to provide sufficient rigidity while retaining sufficient flexibility to conform to uneven terrain, and wherein the wires of the first and second rigidifying grids have a relative spacing between approximately 2 to 4 inches.

3. Regarding independent claim 11 and the dependent claims, the prior art fails to teach or suggest a rubber access mat for forming a roadway or pathway for vehicles and people, comprising: a flexible rubber slab having opposed side edges defining a width and opposed end edges defining a length; a first rigidifying grid of reinforcing wire embedded within the rubber slab and consisting of a plurality of parallel spaced wires embedded within the rubber slab along a first plane and extending between the opposed side edges for most of the width of the rubber slab and a plurality of parallel spaced wires embedded within the rubber slab and extending between the opposed end edges for most of the length of the rubber slab; and a second rigidifying grid of reinforcing wire embedded within the rubber slab and consisting of a plurality of parallel spaced wires embedded within the rubber slab along a second plane that is different from the first plane and extending between the opposed side edges for most of the width of the rubber slab and a plurality of parallel spaced wires embedded within the rubber slab and extending between the opposed end edges for most of the length of the rubber slab; wherein the diameter of the reinforcing wire is not smaller than the diameter of number ten gauge wire in order to provide sufficient rigidity while retaining

Art Unit: 1783

sufficient flexibility to conform to uneven terrain, and wherein the wires of the first and second rigidifying grids have a relative spacing between approximately 2 to 4 inches.

4. Regarding independent claim 19, the prior art fails to teach or suggest a roadway for vehicles and people formed of at least one rubber access mat, wherein the rubber access mat comprises: a flexible rubber slab having opposed side edges defining a width and opposed end edges defining a length; a first rigidifying grid of reinforcing wire embedded within the rubber slab along a first plane and consisting of a plurality of parallel spaced wires extending between the opposed side edges for most of the width of the rubber slab and a plurality of parallel spaced wires extending between the opposed end edges for most of the length of the rubber slab; and a second rigidifying grid of reinforcing wire embedded within the rubber slab along a second plane that is different from the first plane and consisting of a plurality of parallel spaced wires extending between the opposed side edges for most of the width of the rubber slab and a plurality of parallel spaced wires extending between the opposed end edges for most of the length of the rubber slab; wherein the reinforcing wire is not less than number ten gauge wire, and wherein the wires of the first and second rigidifying grids have a relative spacing between approximately 2 to 4 inches.

5. The closest prior art of Bickett (US 1,453,123) teaches a rubber mat reinforced with a wire net, however, fails to teach an access mat for forming a roadway including a rubber slab or a roadway with a rubber slab being made from recycled vehicular tires with a thickness of 3 inches, with grids in different planes wherein the diameter of the reinforcing wire of the first and second rigidifying grids not being smaller than the

Art Unit: 1783

diameter of number ten gauge wire, being six and three gauges in the different directions, the wire being of different gauges in different directions, the spacing being the wires being the same or different and the spacing being two or three inches in one direction and different in the different directions and wherein the wires of the first and second rigidifying grids have a relative spacing between approximately 2 to 4 inches. Applicant provides arguments distinguishing Bickett at pages 7 and 11-12 of Applicant's Paper filed 4/22/2011.

6. The secondary references of record do not teach or suggest the combined limitations not taught by Bickett.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
